MedLink

Weekly Project Progress Report

MedLink Team

Our team is a cohesive and well-integrated unit, combining diverse skills and perspectives to achieve a common goal. Each member contributes unique strengths, which enables effective collaboration and ensures that all aspects of the project are developed with high quality and consistency.

Week Number

Work completed this week

During this week, the structural foundation of all pages for the MedLink platform was completed using standard HTML5 practices. The layout was designed with semantic HTML and proper element structuring to ensure accessibility and ease of use.

The interfaces were distributed according to user roles (Citizen, Pharmacy, Admin) to ensure a smooth and intuitive user experience.

Project Structure

The project files were organized in a clear tree structure to facilitate future development and maintenance:

assets (CSS & JS):

Contains the global styling file `global.css`, the JavaScript logic file `medlink-ui.js`, as well as icons and illustrative images.

- images: Includes the project logo and related visual assets.
- pages: Pages are divided into categories as follows:
 - auth/ Login and registration pages.
 - citizen/Citizen dashboard and medicine search services.
 - pharmacy/Pharmacy dashboard and order management.
 - admin/Admin control panel and system management.

Form Elements

All required fields and buttons in the designed forms have been implemented and verified. The main forms include:

Login Form

- Input fields: Email address, Password, Role selection (Citizen / Pharmacy)
- Buttons: "Sign In", "Forgot Password"

Registration Form

- Step-based system: the user selects the account type first, then enters details
- Input fields: Full name, Phone number, Location (for pharmacies), Password and Confirm Password

Settings Form

- Image upload feature (File Input) for profile picture
- Interactive buttons to update and save user information

The following pages have been fully developed:

Section	Completed Pages
Login & Authentication	index.html, login.html, register.html
Citizen	citizen-dashboard.html, medicines.html, medicine-details.html, requests.html, settings.html
Pharmacy	pharmacy-dashboard.html, pharmacy-orders.html, pharmacy-settings.html
Admin	admin-dashboard.html, admin-medicines.html, admin-users.html, admin-reports.html

Technical Notes

- FontAwesome 6.4.0 was used for icons to provide a modern UI appearance
- Fonts used: Inter and Outfit to ensure clear and readable typography
- All forms support basic HTML5 validation features (e.g., type="email", required) to ensure data integrity and user input correctness

Problems encountered

-
- ✓ • Managing multiple pages and keeping consistent design across them
 - Handling form structure for different user roles
 - Organizing files and linking pages correctly
 - Ensuring proper validation for all input fields

Solutions applied

-
- ✓ • Used a consistent layout and reusable structure across all pages
 - Divided interfaces based on user roles to simplify development
 - Applied HTML5 validation attributes (required, type, etc.)
 - Organized files into clear sections to improve maintainability

Plan for next week

In the upcoming week, the focus will be on enhancing the visual design of the platform by applying CSS styling to transform the basic HTML pages into attractive and modern interfaces. Responsive design techniques such as Flexbox and CSS Grid will be implemented to ensure that the layout adapts smoothly to different screen sizes without content overlapping or disappearing.

Additionally, efforts will be made to maintain consistency in colors, fonts, and overall design across all pages to provide a unified and user-friendly experience.

Questions for Instructor

- Is the current HTML structure considered clean and well-organized?
- Are we using semantic HTML elements correctly (e.g., header, section, nav)?
- Is the file structure and page organization appropriate for this stage of the project?
- Are there any improvements recommended in the HTML structure before proceeding further?
