MedLink

Weekly Project Progress Report

MedLink Team

Our team is a cohesive and well-integrated unit, combining diverse skills and perspectives to achieve a common goal. Each member contributes unique strengths, which enables effective collaboration and ensures that all aspects of the project are developed with high quality and consistency.

Week Number

Work completed this week

To transform the "stiff" HTML structure of the MedLink platform into an attractive, professional, and user-friendly interface while ensuring full responsiveness across all devices.

Design Consistency & System

We implemented a centralized design system in `global.css` to maintain a uniform look and feel across all dashboards and landing pages.

A. Color Palette & Brand Identity

Using CSS Variables, we defined a palette derived from the MedLink identity:

- Primary Blue (#074799): Represents trust and medical professionalism.
- Accent Cyan (#00a9e0): Used for interactive elements, links, and highlights.
- Success Green (#97c93e): For availability status and success notifications.
- Background Main (#f0f7ff): A soft blue-tinted white to reduce eye strain.

B. Typography

- Headings: Outfit font for a modern, bold, and tech-forward feel.
- Body Text: Inter font for maximum readability and a clean professional look.

C. Standardized Components

- Cards: Consistent border-radius (24px), subtle shadows, and hover transitions for a premium feel.
- Buttons: Rounded "Pill" shapes with smooth transition effects.
- Badges: Unified badge styles for status indicators.

Features implemented

Structure & Responsiveness (Flexbox/Grid)

To ensure no content disappears or overlaps on small screens, we utilized modern CSS layout techniques:

Feature	Implementation	
Grid System	display: grid with grid-template-columns: repeat(auto-fill, minmax(300px, 1fr)).	Elements stack naturally from 3 or 4 columns on Desktop to 1 column on Mobile.
Flexbox	display: flex for navigation, header components, and button groups.	Ensures perfect alignment and distribution of space.
Media Queries	Strategic breakpoints at 1024px, 768px, and 500px.	Font sizes (clamp()), padding, and section spacing scale down proportionally.
Mobile Navigation	JavaScript-powered Hamburger Menu.	Replaces the desktop navbar on smaller screens to prevent clutter.

Visual Enhancements (UI/UX)

- Glassmorphism: The hero search bar uses backdrop-filter: blur(16px) and transparency to create depth.
- Micro-animations:
 - Cards lift slightly (translateY(-8px)) on hover.
 - Smooth transitions on all interactive elements.
 - Animated background "blobs" to create a dynamic, modern feel.

Problems encountered

- Issues with overlapping elements appear when the screen is minimized.
- Some elements are not organized across different pages.
- Spacing and sizing are adjusted appropriately for all devices.
- Issues with the mobile navbar design.

Solutions applied

- Use `grid-template-columns: repeat(auto-fill, minmax(...))` to resolve overlapping issues.
- Consolidate all values within `global.css`.
- Use Media Queries at different breakpoints (1024px, 768px, 500px).
- Apply Flexbox for alignment adjustments.
- Use JavaScript to create a mobile 'Hamger' menu.

Plan for next week

-
- Implement JavaScript interactivity using DOM manipulation.
 - Add client-side form validation with error messages.
 - Develop UI components (modals, dropdowns, sidebar).
 - Ensure smooth and responsive user experience across devices.

Questions for Instructor

-
- Is the structure of the HTML pages (using semantic tags like ``<main>``, ``<section>``) appropriate and well-organized?
 - Is the responsiveness level sufficient for all devices, or does it need further improvement?
 - Is the current design considered modern (UI) and suitable for the project?
